Type Documentary

Duration 23 minutes

Type of Public Family audiences

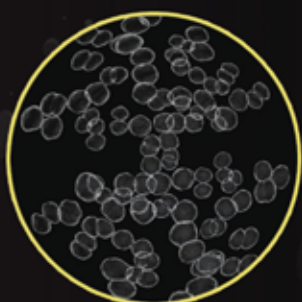

Languages English, Dutch, French, Spanish, Portuguese, German, Japanese, Korean

Synopsis Origins of Life deals with some of the most profound questions of life science: the origins of life and the human search for life beyond Earth.

Starting with the Big Bang, in chronological order, the show deals with the prebiotic chemistry in the Universe, the formation of stars, formation of solar systems, and the first life on Earth. Furthermore Origins of Life covers the great extinctions as well as our search for (primitive) life beyond planet Earth.

Origins of Life is a inspirational journey through time and a celebration of life on Earth. It features many recent discoveries related to life science, demonstrating that if there was ever a time that science made its greatest advances, it's right now!

origins of

LIFE

"There is something in that show that touches audiences. I'm sure it's the combination of music, images and the way they are used."

- Jack Dunn, Mueller Planetarium, Lincoln, Nebraska -

The full dome video planetarium show, that shakes the world of Earth/Life/Planetary science to its core!
